

## **BAB 5**

### **KESIMPULAN DAN SARAN**

#### **5.1 Kesimpulan**

1. Senyawa 4-metoksikhalkon dapat disintesis secara konvensional dan dengan bantuan iradiasi gelombang mikro.
2. Rendemen sintesis 4-metoksikhalkon secara konvensional ( $83,61 \pm 14,85\%$ ) lebih besar dibanding dengan sintesis dengan bantuan iradiasi gelombang mikro ( $52,82 \pm 11,73\%$ ).
3. Reaksi antara 4-metoksiasetofenon dengan 2-nitrobenzaldehid tidak menghasilkan derivat senyawa khalkon namun menghasilkan senyawa 3-hidroksi-1-(4-metoksifenil)-3-(2-nitrofenil)propan-1-on secara metode konvensional ( $59,25 \pm 11,72\%$ ).
4. Reaksi antara 4-metoksiasetofenon dengan 2-nitrobenzaldehid belum berhasil menghasilkan senyawa khalkon dengan bantuan iradiasi gelombang mikro.
5. Adanya substituen gugus nitro posisi orto pada 2-nitrobenzaldehid menyebabkan belum terbentuknya senyawa 4-metoksi-2'-nitrokhalkon dengan konsentrasi NaOH 0,125 mmol baik secara konvensional maupun iradiasi gelombang mikro.

#### **5.2 Saran**

1. Penelitian berikutnya untuk sintesis senyawa 4-metoksikhalkon dengan bantuan iradiasi gelombang mikro dapat dilakukan dengan menggunakan daya yang lebih besar.
2. Sintesis 4-metoksi-2'-nitrokhalkon disarankan menggunakan katalis asam karena dalam katalis basa dapat menyebabkan reaksi *Baeyer-Drewsen* yang merupakan sintesis dari *indigo dye*.
