BAB 5

SIMPULAN

5.1. Simpulan

Eudragit RL-100 dan propilen glikol masing-masing memiliki efek yang searah terhadap pelepasan dan penetrasi. Eudragit RL-100, propilen glikol, maupun interaksi antara keduanya dapat meningkatkan fluks pelepasan dan penetrasi propranolol HCl pada *patch* dengan luas 7,065 cm^2.

Kadar Eudragit RL-100 sebesar 15% dan propilen glikol 10% akan memberikan penetrasi dan pelepasan propranolol HCl yang optimum, yaitu 20,17 µg/mL untuk fluks pelepasan dan 1,89 µg/mL untuk fluks penetrasi.

5.2. Alur Penelitian Selanjutnya

Ditinjau dari perbedaan yang besar antara jumlah konsentrasi propranolol HCl yang terlepas dan yang terpenetrasi, disarankan untuk penelitian formulasi selanjutnya selain menggunakan matriks dan *plasticizer* dalam formula, ditambahkan juga komponen *enhancer* agar dapat meningkatkan jumlah obat yang dipenetrasi.

Dilakukan juga penelitian untuk memvalidasi nilai persamaan yang didapat dengan metode desain faktorial.
