

## CHAPTER 5

### CONCLUSION AND SUGGESTIONS

#### 5.1. Conclusion

This research was done to answer two research questions proposed in Chapter 1, which is to find out any correlation between the frequency of watching English movies (variable X) and listening achievement score (variable Y) and the underlying factors or motivation behind the high frequency of watching English movies and its impact on overall listening skills. The data was collected using three instruments, including questionnaire, listening achievement scores, and interview. By utilizing SPSS statistic program, the researcher discovered a strong correlation between the two variables, as the Pearson Product Moment coefficient value is showed at 0.586.

Another instrument used in this research was interview. By interviewing the top three students which meet the highest number in both variables, the researcher was able to derive further information about the real factors behind the activity of watching English movies and how it affected them in terms of listening skill development. Based on their answers, the researcher can conclude that English movies do have benefits in improving their listening skills, leading to better listening achievement scores.

Overall, the researcher came to a conclusion that there is a strong correlation between the frequency of watching English movies and

listening achievement score. There are also some underlying factors or motivation behind the high frequency of watching English movies such as the storyline, the actors, and the entertaining factors. All of the motivating factors can help students to gain more exposure regarding spoken English to endorse English language acquisition through incidental learning.

## **5.2. Suggestions**

### **5.2.1. For Lecturers**

This research may provide English lecturers with information about the impact of watching English movies on the students and to help them consider movies as one of listening activities in the teaching and learning process.

### **5.2.2. For English Department Students**

This research may provide students insight about the benefits of watching English movies frequently. They can learn to take advantage of their watching English movies to improve their listening scores.

### **5.2.3. For Future Researchers**

The researcher hopes more researches conducted on this topic in the future. Future research may study with different population and sample to elaborate more findings and analysis to support the findings of this research.
