

BAB V

KESIMPULAN DAN SARAN

5.1. Kesimpulan

1. Kandungan total fenol rata-rata pada daging buah terung belanda sebesar 28,6379 mg GEA/100 g bahan, kulit 136,9973 mg GEA/100 g bahan, biji 117,5573 mg GEA/100 g bahan, dan cairan kolumela sebesar 137,7431 mg GEA/100 g bahan.
2. Daging buah terung belanda memiliki rata-rata kemampuan menurunkan DPPH sebesar 12,2905 mcg eq. DPPH/100 g bahan, kulit 32,4475 mcg eq. DPPH/100 g bahan, biji 36,4397 mcg eq. DPPH/100 g bahan, dan cairan kolumela sebesar 51,6010 mcg eq. DPPH/100 g bahan.
3. Terdapat dua pigmen dominan teridentifikasi secara tentatif pada kulit terung belanda dengan spectrum serapan 516 nm sebagai delphinidin dan spektrum serapan 507 nm dan 436 nm pelargonidin.
4. Cairan kolumela terung belanda memiliki tiga pigmen dominan dengan spectrum serapan 520 nm sebagai delphinidin, spektrum serapan 527 nm, dan spetrum serapan 518 nm sebagai delphinidin.

5.2. Saran

1. Perlu dilakukan penelitian lanjutan untuk memantapkan jenis antosianin apa saja yang terdapat pada bagian-bagian buah terung belanda.
2. Untuk memenuhi saran rekomendasi konsumsi daging buah terung belanda sebanyak ± 150 g dapat dipenuhi dengan mengkonsumsi 5-6 buah terung belanda. Selain itu cairan kolumela terung belanda ada baiknya ikut dikonsumsi karena memiliki nilai IC₅₀ yang cukup tinggi sehingga dapat mengurangi limbah dan pemanfaatan terung belanda

lebih maksimal. Selain itu perlu dilakukan pengkajian batas aman konsumsi terung belanda.
