

## **BAB IV**

### **PENUTUP**

#### **4.1. Kesimpulan**

1. *Chitosan* mampu menyebabkan penurunan *degrees of deacetylation (DD)* yang dapat mempengaruhi aktivitas mikroba *Listeria monocytogenes* pada daging..
2. *Chitosan* mampu digunakan sebagai *edible film*.
3. Penambahan maksimum *chitosan* ialah 1%, apabila lebih dari 1% dimungkinkan timbul aroma udang pada daging.

#### **4.2. Saran**

Perlu diadakan penelitian mengenai penggunaan konsentrasi *chitosan* pada daging.
