

V. KESIMPULAN DAN SARAN

5.1. Kesimpulan

1. Variasi penambahan putih telur berpengaruh nyata terhadap sifat fisikokimia kukis pisang mas. Semakin tinggi persentase penambahan persentase putih telur nilai *spread ratio* ($5,41\pm0,45$ – $6,91\pm0,94$) *redness* ($7,26\pm1,37$ – $10,52\pm0,98$) dan *chroma* ($16,08\pm2,57$ – $20,46\pm2,92$) meningkat sedangkan nilai kadar air ($3,08\%\pm0,50\%$ – $3,76\%\pm0,51\%$); *hardness* ($1022,81\pm184,85$ – $1997,61\pm315,80$); *lightness* ($44,50\pm1,54$ – $48,48\pm2,54$); *yellowness* ($13,82\pm2,38$ – $18,42\pm2,48$); dan *Hue* ($55,20\pm2,21$ – $64,72\pm2,36$) semakin menurun.
2. Variasi penambahan putih telur berpengaruh nyata terhadap sifat organoleptik kukis pisang mas yang meliputi tingkat kesukaan terhadap warna dan rasa.
3. Perlakuan terbaik pada variasi penambahan putih telur terhadap pisang mas dilakukan menggunakan metode pembobotan adalah perlakuan T3 yaitu penambahan putih telur sebesar 13,4% dengan tingkat kesukaan agak suka hingga suka.

5.2. Saran

Kukis yang dihasilkan dalam penelitian ini memiliki tekstur yang beremah sehingga perlu dilakukan penelitian lebih lanjut untuk mengurangi tekstur beremah tersebut dengan penambahan *binder agent* dari senyawa pati seperti tepung maizena untuk menghasilkan tekstur kukis yang lebih kokoh dengan tetap mempertahankan kerenyahan kukis sehingga masih dapat diterima oleh konsumen.
