

## BAB VI

### KESIMPULAN

Berdasarkan hasil penelitian yang dilakukan dapat disimpulkan :

1. Ada perbedaan pengaruh pH terhadap stabilitas ketokonazol dalam sediaan shampoo pada parameter tetapan laju peruraian (k) dalam formula I, II dan III, dimana harga k rata-rata adalah :

$$\text{Formula I} : k = 6,3639 \times 10^{-3} \text{ hari}^{-1}$$

$$\text{Formula II} : k = 1,8657 \times 10^{-3} \text{ hari}^{-1}$$

$$\text{Formula III} : k = 7,2943 \times 10^{-4} \text{ hari}^{-1}$$

2. pH sediaan ketokonazol dalam sediaan shampoo yang baik adalah pH 6 dengan laju peruraian (k) terkecil dan t90% terbesar.

## BAB VII

### SARAN

Dari hasil penelitian ini dapat disarankan :

1. Perlu dilakukan penelitian stabilitas ketokonazol dalam bentuk sediaan lain.
2. Perlu dilakukan penentuan stabilitas sediaan shampoo ketokonazol secara mikrobiologis.
